

Kimball Water Treatment Plant Improvements Project

11/3/08

This project is currently in its CONSTRUCTION.

The City of Calistoga, with the assistance of consulting engineer Erler and Kalinowski, Inc., completed the design of certain improvements to be located at the City's Kimball Water Treatment Plant.

The Kimball Plant, which treats water from Kimball Reservoir to full drinking water standards, will be receiving several enhancements to increase plant reliability and improve operations. This project includes improvements to the water clarifier, filters, and ancillary facilities used in the treatment of drinking water. The improvements will increase the ability of the plant to safely treat water to meet all standards and requirements, including during times when the water in Kimball Reservoir becomes very mixed after storm events. This project has a total cost of just over \$1 million, and the City will be paying for almost the entire project cost through the use of a grant from the United States Dept. of Agriculture, Rural Utilities Service.

The City bid the project in September 2008, and TICO Construction of Palo Cedro, CA is the selected contractor for the project. Construction began in October 2008, and the project should be completed in Spring 2009.
