PIONEER GALAXY® water storage tanks

BlueScope Water manufactures the PIONEER GALAXY® range of water storage tanks from 10,000 gallons up to 65,000 gallons. Each PIONEER GALAXY® water storage tank is designed to meet the specific requirements of the application for which it is to be used as well as the location or environment in which it is operating.

PIONEER GALAXY® water storage tanks are suitable for ranch and well water storage, rainwater collection and fire fighting water storage. The PIONEER GALAXY® water tank combines strength with the aesthetic appeal of no protruding bolts due to the innovative, fully enclosed bolt cap.

The high strength but lightweight steel shell combines with a polymer composite – AQUALINER® water storage liner to provide a flexible, long lasting and top quality tank system. The liners are approved to NSF/ANSI 61 for the storage of drinking water ensuring the quality and dependability of the water supply.

Unique construction methods allows the PIONEER GALAXY® water tank to be constructed on site in minimal time. The construction methods suit installations even where they are in difficult or remote sites. Minimal site preparation is also required, with many tanks designed to sit on a 6" minimum thickness sand pad.

All of the design and attention to detail is backed with quality materials and valid up to date engineering certification and a reputation we are not willing to compromise. These features combined with a 10-year warranty and a high level of aftermarket service. This gives you, the customer, peace of mind that what you have purchased is of high quality and the right product for the application.

For our 16-page booklet on these tanks, call 877-389-1099 or [contact BlueScope Water](#) today.
